# What is the output terminal of photovoltaic inverter

## Overview

---

Connecting the output line of a photovoltaic (PV) inverter is critical for converting solar DC power into usable AC electricity. They work by converting the power obtained from the DC source, which is the input source of the inverter, into AC, which is the output source of the inverter, and then distributing it to various devices that require AC sources. Circuit Breaker or Disconnect. \*For the AC power terminals on Solar Inverter with Site Controller (1538000-45-y), see AC Power Wiring. AC power output terminals and PV input terminals (MPPT DC inputs) are rated to a minimum of 60°C.
