# What is the positive pole of the photovoltaic panel plug

## Overview

---

Which end of the solar panel is the positive pole?

In the context of solar panels, the positive terminal is typically located at the rear of the panel, where the junction box is situated. This specific point allows for efficient wiring and connection to an external electrical circuit. If the polarities are not labeled, two methods can be used to check. The first is by looking at the diode and the second is by testing with a multimeter. Inside, you will usually find a bypass diode. On the DC side of a PV array, ground faults typically occur on. Solar panel / which end is pos/neg?

When running the PV line, which plug is positive to be red, and which plug is negative to be black?

Does it matter?

One mc4 plug would be described as female, the other would be a male.
