# What to do if the wind is weak in wind power generation

## Overview

---

Below we break down the key causes of wind turbine failure and explain some of the steps you can take to minimise their impact. **Wind Speed:** The most crucial factor, as wind turbines require a minimum wind speed to start generating electricity and have an optimal speed range for maximum efficiency. **Wind Direction:** Consistent wind direction helps. Wind power or wind energy is a form of renewable energy that harnesses the power of the wind to generate electricity. If not properly managed, system dynamics can lead to stability problems and potential costly blackouts. The latest IPCC report suggests that average wind speeds over Europe will reduce by 8%-10% as a result of climate change.
