Wind Blocks Wind Turbine Generator

Overview

Wind power or wind energy is a form of renewable energy that harnesses the power of the wind to generate electricity. It involves using wind turbines to convert the turning motion of blades, pushed by moving air (kinetic energy) into electrical energy (electricity). 1 km) from Block Island, Rhode Island in the Atlantic Ocean. The five-turbine, 30 MW project was developed by Deepwater Wind, now known as Ørsted US Offshore Wind. Modern wind turbines are. Generates an estimated 18,396,000 kWh of wind power per year, providing essentially 100% of energy needs for all households on Block Island and an estimated 12,500 households on the Rhode Island mainland.
